

Installation Guide

This installation guide is intended for system administrators who plan to deploy Kuta Software products.

Summary

For a **single-user license** (good for one teacher; that one teacher may use it on up to two computers):

- 1) Install the software. Do not run it.
- 2) Log out as the administrator. Have the teacher log in using their user name, run the software, and activate it. This activation is now tied to this user name.
- 3) Ask the teacher to deactivate the software by clicking Help > Deactivate before summer vacation, re-imaging the computer, replacing the computer, or uninstalling the software. This will release the activation for later use.

For a **site license** (good for one campus of one school):

- Standard installation, for a small number of computers. On each computer:
 - 1) Install the software.
 - 2) On Windows XP and prior, do one of the following: (1) Run the software as the administrator and activate it. This activation is good for all users on this computer. –OR– (2) The first teacher to run the software will activate it for the whole machine. They will need the product serial number and permission to write to `HKEY_LOCAL_MACHINE/Software/Kuta Software`. You can either share the product serial number with each teacher, or type the serial number (such as 1-A1MA-BBBB-CCCC-DDDD) into `config.txt`, in the program's installation folder.
 - 3) On Windows Vista and later: Log out as the administrator. Each user that is going to use this software will need to activate it on this computer. You can either share the product serial number with each teacher, or type the serial number (such as 1-A1MA-BBBB-CCCC-DDDD) into `config.txt`, in the program's installation folder.
- For a mass deployment:
 - 1) Obtain a copy of the MSI file, version 1.45 or later. Download this from www.kutasoftware.com under Support if necessary.
 - 2) Install the software on each target machine. Do not run it.
 - 3) Find `config.txt`, in the program's installation folder.
 - 4) On a blank line in this file, type the product serial number (such as 1-A1MA-BBBB-CCCC-DDDD). If you have multiple products, you may enter all of the product serial numbers (one per line) and then use the same `config.txt` for all of the products.
 - 5) Copy this file to each target machine, overwriting the existing copy.
 - 6) When a teacher runs the software for the first time, they will be asked to activate the software. They will not be asked for the product serial number. For Windows XP and before, this activation is once per-machine. For Windows Vista and later, this activation is once per-user-per-machine.

Internet Access

The software requires Internet access for: activation, checking for updates, and deactivation. There are back-up methods for each of these that work through a web browser in case Internet access is available but the software itself is blocked by a firewall. It is easier and faster if the program is not blocked. The program needs HTTP access (port 80) to `kutasoftware.com`.

Additional Information

For the software to function normally, users will need permission to read and write values to the registry. User preferences, recently used files, and software activation data are stored in the registry.

Activation Data:

Single-User License:

`HKEY_CURRENT_USER\Software\Kuta Software`

Site License:

Windows 7 and Vista: `HKEY_CURRENT_USER\Software\Kuta Software`

Windows XP, 2000, ME, 98: `HKEY_LOCAL_MACHINE\SOFTWARE\Kuta Software`

Preferences and other data are stored in:

`HKEY_CURRENT_USER\Software\Kuta Software`

Mechanisms such as ghosting or drive re-imaging that *regularly* reset all user data are not recommended since the software would need to be activated after each reset.
